## UV Light Safety

The manufacturer:

METAPHASE TECHNOLOGY  
200 RITTENHOUSE CIRCLE,  
WEST UNIT 7  
BRISTOL, PA 19007 USA

By placing a PO, purchasing and using a Metaphase Technologies UV (ultraviolet) emitting product, you agree to follow the min safety suggestions below. This includes any light with a peak wavelength shorter than 405nm

1. Do not look directly into the UV light or UV LEDs during operation. The UV LEDs radiate intense ultraviolet light (referred to as "UV light") which has been found to be harmful to the eyes, even if only for a brief period of exposure. UV light IS NOT VISIBLE TO THE HUMAN EYE and individuals unknowingly exposed to the UV light may not notice it.
2. Always wear UV protective eyewear when operating UV lighting products.
3. UV light can cause skin damage and cancer. For more information, visit: <https://www.cancer.org/cancer/cancer-causes/radiation-exposure/uv-radiation.html>
4. Always instruct and warn all operators of proper handling of UV lighting products and all potential risks. Always ensure proper training and protective gear is easily accessible to all users of the products.
5. Keep the UV lighting products out of reach of children and any untrained individuals.

Metaphase Technology  
Kevin High

A handwritten signature in black ink, appearing to read 'Kevin High', is written over the printed name.
